Garage Measure-First Checklist

Measure before you buy shelving, racks or hooks, so everything fits the first time.

Measurements (inches)

Usable wall length, left side	
Usable wall length, right side	
Back wall length (between doors/outlets)	
Ceiling height	
Lowest point of garage door track or opener	
Space the car needs (front + sides)	
Workbench area width	

Before you buy

- ☐ Marked studs on each wall you'll mount to
- ☐ Checked the weight rating of every rack and shelf
- ☐ Kept walkways clear for car doors to open
- ☐ Checked overhead racks clear the door and opener when open
- ☐ Listed what you need to reach weekly (keep it at waist to eye level)
- ☐ Sorted items into keep / donate / toss first

Tip: Overhead racks are for light, seasonal items. Follow the maker's weight limits and install into framing as directed.
